Universal Data Mover Gateway

The easy way to automate B2B file transfers

When Your Data Stops, Does Your Business?

Managing the flow of business critical data between you and your external trading partners doesn't have to be challenging, or time consuming.

Universal Data Mover Gateway (UDMG) automates, secures, and simplifies your B2B file transfers by:

- Reducing time to market through quick onboarding and simplified management of protocols, trading partners, and users.

- Improving visibility through a centralized dashboard with real-time monitoring.

- Enhancing perimeter security through authorized file transfers in the DMZ without any open inbound ports.

- Automating the integration with back end applications and systems.

Advanced B2B File Transfer Automation made easy

- Trading partner management
- Secure file transfers
- End to end automation
- Analysis service for your current FTP environment

High Performance and High Availability

B2B File Transfers are mission critical, there's no time for downtime. UDM Gateway is a reliable and high-performance solution offering high-availability with synchronized production and failover servers.

Community Management

Quick turnaround is essential when onboarding or maintaining your trading partner network. UDM Gateway community management provides rich features for deploying networks as well as using custom and and preconfigured templates.

Certificate Management

Comprehensive certificate management allows for overlapping certificates and scheduled certificate replacement to meet each of your trading partner's needs.

Advanced Multiprotocol Communications

Universal Data Mover Gateway supports all major file transfer protocols including FTP/S, SFTP, SCP, HTTP/S, ebDAV and AFTP and accelerates your file transfers.

stonebranch

Solution Highlights

■ **Secure File Transfer**
Protect data in transit and rest using government grade encryption and secure file transfer protocols.

■ **Platform Independence**
Supports all major platforms including Windows, Unix, Linux, Mac OSX and Unix.

■ **Regulatory Compliance**
Achieve PCI DSS, HIPAA, SOX and GLBA compliance requirements.

■ **Automation**
Automate scheduled and event driven processes and file transfer between trading partners.

■ **Consolidated Control**
Unify all services, users and processes into a single easy to manage solution.

■ **High Availability**
Synchronize server configuration data in real-time to one or more failover servers.

■ **Accelerated File Transfers**
Accelerate your file transfers up to 100x using AFTP (Accelerated File Transfer Protocol).

Automation Integration

Coordinating your file transfers with the processes that create and consume your data is easy with UDM Gateway. Whether you use the Stonebranch family of workload automation solutions or products from other vendors, UDM Gateway is a valuable addition to your automation toolkit.

Securing File Transfers Through Your DMZ

Storing or staging sensitive data in the DMZ violates most regulatory compliance standards. UDM Gateway prevents any of your data from landing in the DMZ, and prevents inbound network connections from the Internet to your internal network.

Get a Grip On Your current FTP, SFTP, and FTPS File Transfers

Stonebranch can show you all of the systems running FTP, who's using them, and what they are doing. It's a great first step to a consolidated management strategy for your File Transfers, contact Stonebranch today to find out how.
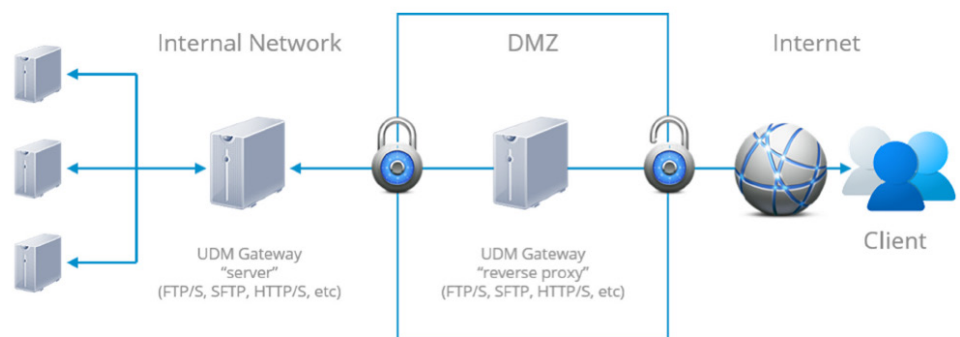

B2B file transfers are mission critical, so there's no time for downtime. Universal Data Mover Gateway is a reliable and high-performance solution offering high-availability with synchronized production and failover servers.
